SUMMARY

Full Stack Web Developer bringing high energy and focus to each coding project. Currently pursuing a certificate from the University of Denver Coding Bootcamp in Full Stack Web Development to further enhance my skill set. Newly learned skills in HTML, CSS, and Javascript combined with high energy and focus allows for attention to detail problem solving when coding in these areas. Able to grasp bigger picture ideas without losing sight of smaller aspects. Highly competitive with a team mentality enables leadership that ensures everyone involved is putting in maximum effort. On each project I've worked on I am always looking to grasp the main goal while adding a personal touch to user experience. I am currently working on a project in order to implement JQuery as well as Bootstrap into my coding, extending my list of skills. I look forward to using my skills in a passionate team that values quality and innovation in order to build a unique user experience on the web.

PROJECTS

SoundBites — *Planning made easier*

Project in collaboration with three other Full Stack Developers. The website allows the user to find events near them and a food establishment near the location of the event. The chosen picks are saved for the user to view later.

SKILLS

Coding in HTML, CSS, Javascript, and Node.js.

LANGUAGES

English, Spanish
